How Did I Score Compared to Others?

A percentile is a number between 1 and 99 that shows how your score ranks compared to other students. It represents the percentage of students whose scores are equal to or below yours. For example, if your Math score percentile is 57 that means 57 percent of test-takers have Math scores equal to or below yours.

You'll see two percentiles:

The **Nationally Representative Sample Percentile** shows how your score compares to the scores of all U.S. students in your grade, including those who don't typically take the test.

SAT[®] User Percentile — National shows how your score compares to the scores of students who typically take the test.

Will My Scores Change and Why?

Tests are not exact measures, and many factors can affect your score. After all, no two days are the same, and if you took the SAT once a week for a month your scores would change.

That's why it helps to think of your true score as a range from a few points below to a few points above the score earned. Score ranges show how your score can change with repeated testing, assuming
